Subject: COMMENTS ON GRADE M AMOSITE FIBERS

Date

MARCH 31, 1970

DEAR GUY:

AFTER EXAMINING THE SAMPLE OF GRADE "M" AMOSITE FIBERS, OUR PEOPLE HAVE ARRIVED AT THE FOLLOWING CONCLUSIONS:

1. THE SAMPLE IS DEFINITELY NOT A REASONABLE SUBSTITUTE FOR GRADE D-11 FIBER.
2. NOT ONLY IS THE SAMPLE DUSTY AND FULL OF TRASH, BUT IT APPEARS TO CONTAIN MANY SHORT FIBER LENGTHS AND FAR TOO FEW FIBERS OF 1-1/2" TO 3" IN LENGTH.
3. GRADE "M" FIBERS ARE BLuish-GRAY IN COLOR - NOT THE WHITER TYPE THAT D-11 IS.
4. GRADE "M" FIBER WOULD BE A GOOD SUBSTITUTE FOR SCRAP, BUT WOULD CERTAINLY PRESENT A SERIES OF PRODUCTION PROBLEMS IF USED IN THE DRY BATCH WITHOUT A SUFFICIENT QUANTITY OF GOOD D-11 GRADE TO BEEF UP THE GRIND AND LAP.

NOTE: THIS DOCUMENT DID
NOT COME FROM PPG FILES
