DOCUMENT DESCRIPTION: Stokinger on Asbestos Cement Pipe Part 2
of 2

water.

In spite of the concern for toxicity of substances in our environment, discovery of substances antagonistic to the toxic effects holds considerable promise for future protection.

A CORRECTION

NOTE TO EDITOR

An inaccuracy appeared in our press release distributed February 7 reporting on the paper given by Dr. Herbert E. Stokinger, toxicologist from the National Center for Urban and Industrial Health, Cincinnati, at the ASCE National Meeting on Water Resources Engineering held in New Orleans.

The sentence was "The appearance of asbestos induced tumors in women has implicated asbestos-cement water pipe as the source of asbestos."

We have been advised by Dr. Stokinger that this statement was not made.
