Rita Riffle
Executive Secretary

A meeting of the CIFA Talc Subcommittee was held on Tuesday, April 3rd, 1979 at the CIFA Offices in Washington, D.C. A list of the meeting attendees is attached.

Chairman Sandland opened the meeting and discussed the NIOSH/Stanford Research Institute (SRI) talc documentation to date.

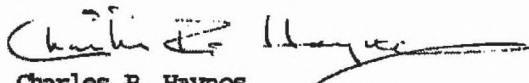

The majority of the meeting was spent in review of the March, 1979 SRI (second) draft, in an effort to develop a list of problems as related to the cosmetic industry. Among the points listed as potential problems were:

- a. A definition of "pure talc" (lines 33-35).
- b. The work-place "action level" (lines 52-58).
- c. The time-weighted average (twa) concentration of 1.5 mg/cm of air (lines 82-86).
- d. The "Medical Surveillance" section (lines 100+).
- e. The "Labeling and Posting" section (lines 185+).
- f. The "Informing Employees of Hazard from Talc" section (lines 315+).

Chairman Sandland stated that it was the Subcommittee's intent to review and incorporate the days' comments in the Subcommittee's original draft. Upon completion, the document will be submitted to the CIFA for review and distribution, prior to submission to NIOSH.

There being no further business, the meeting was adjourned.

Respectfully submitted,

Charles R. Haynes
Director of Cosmetic Chemistry

CRH:pac
4/10/79

I felt that Sandland really did not want any one else at the meeting! I kept C. Haynes + S. Lee. 4-19-79
