Dear Sirs:

We are looking for a refiner to be used in asbestos-cement pipe manufacture to blend and refine a mixture of the following:

Water	79.3%
Cement	9.4
Silica	6.3
Asbestos Fiber	3.3
Ground asbestos-cement scrap	1.6
Pounds per minute	2,080
Density	1.15 glcc

The refiner is to be operated continuously and if possible, fed from an inclined trough in which the water and dry solids have been slightly mixed. The rates given above are the maximum for the solids and the minimum for the water and at 20.7% solids would be the highest concentration of solids we expect to use.

Do you have any equipment which would operate under these conditions? If you have, please send information on construction, price and delivery.

Very truly yours,

CERTAINTEED CORPORATION
