Subject 3Q Sales and Marketing
Services Summaries

Enclosed are copies of 3Q reports on sales by regions, technical service and governmental activities.

Export sales continue strong and are at 106% of budget through September.
Sales by country are as follows:

	<u>\$M</u>	<u>% Export</u>
Japan	912	50.3
Europe	516	28.5
Australia	132	7.3
Canada	112	6.2
"Pan-America"	90	5.0
Taiwan	26	1.4
S. Africa	23	1.3
Other	<u>2</u>	<u> </u>
	\$1813M	100.0%

Total sales should exceed \$7MM compared to last year's record high of \$5.3MM.

Subject 3Q Domestic Sales Summary

File

Sales were again well above budget for the quarter and were about 3% above forecast IV. Strength continues in sales of standard grade and high purity products, probably due to production problems in the Canadian industry and slow start-up by Atlas in California. Resin grade sales and orders for drilling products are about on or modestly above budget.

We anticipate a drop in demand for products by some customers in the 4Q, but those "waiting in the wings" should allow us to meet forecast IV at the end of the year and to require operation of the plant essentially at capacity into 1979.

Subject 3rd Quarter Summary

Sales remain exceptionally strong in Floor Tile and Gun Plastic cement. Both grades continue to run well in excess of budget and it would appear, at this point in time, that strong sales should continue well into the fourth quarter. Atlas Asbestos was to have started production September 18th on a limited schedule with full production beginning on January 1, 1979. However, no confirmation on their limited production is available, and it is impossible to determine if they have returned to work.

HPO sales to Chevron U.S.A. picked up this quarter and are expected to be at a level of 165 tons/year for the bay area. We are still after their large volume business in driveway asphaltics.

Sales of RG-110 to Daubert Chemical, Pomona, CA, could increase to 3 or 4 T/L per month if we were able to supply. They prefer our fiber and the fact we are a local source.

The Calaveras deposit at Copperopolis, CA, appears to have problems. They have advised some customers that short fiber 7R will not be available after January 1, 1979, and what has been available is of low quality and inconsistent from shipment to shipment. Should above be accurate, then we should experience increased sales in asphaltic markets.

Subject 3rd Quarter Asbestos Midwest
Sales Summary & Activity

File

3rd Quarter Activity

Contrary to what was believed, the settlement of the Carey asbestos strike and the start up of Atlas asbestos in California have so far had little effect on sales. Our major floor tile account, Kentile, claims to have learned a lot about our fiber and will stick to three bulk cars per month plus a car or two of bagged material per quarter. Other customers have indicated a desire to stay with us as a second source in order to avoid the Canadian's chronic shortages.

Two major prospects were uncovered in the third quarter, Bitucote Co. who make driveway sealers and Resinoid Engineering, who produce phenolic molding compoundings. Both cite OSHA pressures as a reason for looking at our pellets. Bitucote is a candidate for SG-200 in bulk.

Our main chance for some quick RG-600 business, Manchester Industries, has run into trouble installing their extruder and will probably not be able to process RG-600 until late October. At that time they will distribute samples to their customers for evaluation.

Work at our two largest resin grade potentials, Ford Motor and Wyandotte Paint, is continuing and by year's end we should know whether or not we will be selling them product.

The LTX program has been limping along with very little success. Union City Industries has informed us that they can make products much closer to "dry" RG-144 and RG-244. If this is true, we should have a good shot at some business very quickly, since most people contacted love the concept of a "wet" asbestos product.

A 5-day training course on the composition of paints held at the University of Missouri-Rolla was attended the week of 9/18/78.

3rd Quarter Sales Performance

Total sales at the end of the 3rd quarter rest at 207% of tons and 134% of dollars vs. the year to date budget.

Standard Grade

Standard Grade sales continue to sail along with the 3rd Quarter YTD sales at 263% of budget. Most of this is due to Kentile Floors, but SG-210 has held up very well and our SG-200 prospect, Bitucote, purchased a truckload for evaluation on September 25th, accounting for all SG-200 sales this year.

High Purity & CSV

Both High Purity & CSV have run well over budgeted amounts since April. Although indications are that both will slack off in the 4th Quarter, they will still finish well above budget.

Resin Grade

Resin Grade sales as a group of products (RG-110, RG-144, RG-244) have finally closed in on budget thanks mostly to RG-110 and a phenomenal jump in RG-144 sales. RG-244 has still not overcome a dismal 1st Quarter.

Subject CALIDRIA SOUTH
Third Quarter Summary

ACTIVITY

After the holiday to start the month, a trip was made to the Memphis-Little Rock-New Orleans geography calling on regular accounts with a little prospecting thrown in. The following week was spent at PDL attending the "Theory of Negotiation" workshop course to develop skills and techniques to use in negotiating situations. Vacation and office work concluded July activity and a Florida sales trip ended the month and carried on through the first week in August.

Our HPO business in Florida is increasing slightly with the likes of C. L. Industries, Paradise Pools and Chemex buying in LTL lots. A few prospective 244 accounts were visited, along with a number of other CALIDRIA users formerly serviced by Apperson Chemicals. When our joint cement business went down the drain Florida was the most affected state in the geography and left us with only Gardner Martin, USS and A-Z Products as T/L/C/L customers, so a pioneering effort is underway again to build the business back up. Jim Walter and Celotex were visited on the trip and our pellet project continues to move slowly along with a trial date now established for 12-19 and 20 at Werner-Pfliederer in N. J. A Houston trip was made to call on regular accounts, prospect for new ones and work with D & F Distributing to act as our new southwest distributor. Texas is by far the most dynamic and fastest growing state in the territory and the additional coverage D & F can give us, along with the additional time they can free up for the writer for more prospecting, should increase our sales further. Local Atlanta calls the last week of the month were followed by a trip to San Juan with R. E. Byrne to meet our people there, run a dust count at J & A and call on prospects developed by our Emulsions plant. A series of calls showed that our sales on the island should begin to increase further as J & A is consuming our HPO at a good rate and a number of other prospects are in one stage or another of evaluating HPO in roof sealer formulations provided by the Emulsions plant.

CALIDRIA SOUTH
Third Quarter Summary
Page Two

J. E. Walsh

A week's vacation, office work and an end of the month trip to Dallas covered September's activity. In Dallas a visit was made at Allied Construction, a new T/L HPO customer making asphaltic adhesives for sewer pipe. Usage should be a T/L a quarter. Another new T/L HPO customer is Bird & Son in Shreveport whose initial order is due to ship in early October. Sales calls were made with D & F Distributing's Dallas people in the area along with holding a CALIDRIA indoctrination for them. Our initial carload to stock D & F in both their Houston and Dallas locations should be shipped in mid October. Our two other small distributors in the southwest, Plas-Tex and Greer Industries, will purchase their future requirements ex D & F.

PERFORMANCE

July and August were strong months but September was a bust. Warehouse stocks on HPO, 210 and 110 for the quarter were almost non-existent and most customer orders had to be shipped direct from King City. Through the third quarter, monthly sales are averaging 1400M lbs. and 105M\$ which is about 10% below planned pounds and 5% above planned dollars. Attached are copies of the product sales, activities and expenses for the quarter.

Very truly yours,

J. E. Walsh

Sales Performance

Sales during the third quarter continued very strong as shown by the following:

	<u>July</u>	<u>August</u>	<u>September</u>	<u>Quarter</u>
\$M	237	108	57	401
% Budget	350	160	84	197

The below budget sales in September was due primarily to the return of off-spec material purchased by GAF (Vails Gate, NY) in July and August, and low RG-244 sales. However, sales for October to date have indicated that there is no softening in demand for "Calidria" asbestos as yet in this area. Several small RG-144 & RG-244 prospects began buying during this quarter but their full potential still has to be determined.

Subject Governmental Activities-
 Third Quarter 1978

SPECIFIC PROJECTSAIA/NA Standards Advisory Committee (Chairman)Federal Government

1. The editing of the Equitable Environmental Health report on the use of asbestos in the Construction Industry is still in progress.
2. Testimony was prepared and presented for the AIA/NA at the OSHA hearing on the generic approach for the regulation of carcinogens.
3. Testimony was prepared and presented for the AIA/NA at a hearing in connection with the Nonfuel Minerals Policy Review being conducted by the Department of the Interior.
4. Contacts were made with the EPA in the name of the AIA/NA relative to the exclusion of asbestos from the definition of hazardous waste under Section 3001 of RCRA. Some positive progress appears to have been achieved.

State Government

1. A written presentation was submitted to the State of Montana relative to a proposal for some very strict regulations on the spraying of asbestos-containing materials.

AIA/NA Air Monitoring Committee

1. Data analysis in the Round-Robin monitoring program is in progress.
2. Plans for the AIA/NA hosted international air monitoring meeting to be held in Washington have been finalized. (HBR's meeting)

Approximately 40 experts from all over the world will be in attendance.

Union Carbide

1. Testimony is being prepared for the Standards Board Hearing on regulations for continued use of sprayable, asbestos-containing products in California. These hearings are the result of legislation spearheaded by Union Carbide.

Subject Cost Analysis of Dust
Count Services Provided
Customers in 1977

A breakdown of operating costs for dust counts performed at customer facilities in 1977 is attached (Table I). Manpower costs were allocated as \$240 per manday. Travel expenses and allocation of time were pro-rated in instances where business other than monitoring was involved. Non-capital operating costs were also pro-rated to exclude AIA/NA work and other projects not related to customer monitoring.

Some 38 field tests were performed in 1977; 24 involving the Tech Service group, 11 performed by sales personnel and 3 by Tomoe in Japan. The costs of sales personnel time and travel expenses were not included in this cost analysis. Out-of-pocket costs including travel and non-capital operating expenses totaled \$5,745. An additional \$14,610 for manpower resulted in total expenditures of \$20,355.

The average cost per customer monitoring based on 24 field tests performed by the Tech Service group approximated \$800, the details of which are shown below:

Mandays in Field (Average 1.52 Md/test)	= \$365
Travel Expenses	= 191
Laboratory and Administrative Costs	= 201
Non-Capital Operating Costs	= 40
	<u>\$797</u>

Major areas of expense were travel costs and time spent in the field which were 70% of total costs. Out-of-pocket costs averaged \$231 per field test.

Some 390 airborne samples obtained at 38 customer facilities were counted in 1977 requiring approximately 60 mandays. Ten customers have requested our services through June 1978, accounting for ~150 samples.

1) Mandays in the field and travel expenses were pro-rated in the case of combined business trips involving business other than monitoring.
Costs/Md = \$240.

2) Laboratory and administrative costs of \$15/sample were derived as follows: 20 min/sample - sample preparation and counting.
10 min/sample - data compilation, editing and reporting.
At current AF manpower allocation of \$30/manhour; i.e. \$15/sample.

3) Non-capital operating costs include non-capital equipment, equipment repair and materials such as filter cartridges, chemicals and film.

4) Monitoring tests were performed by sales personnel. The cost of their time and operating expenses are not included.
