S4T - ASBESTOS DUST EXPOSURE

Comments on proposed replies as transmitted under your letter of January 29, 1973, are as follows:

- No. 1 Change to read:
We cannot agree that 3.4.2 should be changed at this time to call for atmosphere supplying respirator protection on asbestos insulation dismantling and spraying only when required by the dust concentration level. This standard assumes that the limits will be exceeded whenever these operations are performed. On small jobs or under favorable, controlled conditions, this may not be true, as several comments have indicated. Therefore, the subcommittee will welcome test data supporting less restrictive procedures for future consideration.
- No. 2 Change to read:
This sentence was taken directly from OSHA.
We believe it referred to testing the respiratory device. . .
- No. 29 Change to read:
Thank you for your comment.
- No. 33 Add at end of reply: Thank you for your comment.
