1. PERMIT POLICY

We have reviewed our overall/permit system and our recommendations follow:

A. Establish new, uniform plantwide permit procedures to cover:

(1). Breaking into Process Equipment (previously covered by First Flange Rules) and

(2). Vehicle access to operating units.

B. Go to a two permit system:

MAJOR (Revised but not changed)

- Cover: Fire
  Vessel Entry
  Special

- Approval: Foreman & Above

"MASTER TAG" (New)

- Cover: Breaking into Process Equipment
  Vehicle Entry
  Work Permit (Where Required)

- Approval: Chief/Leadmen

C. SHAC should be assigned to develop the procedures and format for the "Master Tag" permit.

We should target to begin implementation before the end of 1982.

2. REMOVAL OF CONTAMINATED CLOTHING

The following action plan was developed:

A. Policy - Kaldenberg

Define the plant policy regarding the individual's commitment to remove contaminated clothing or the duties of those near the individual to assist as necessary.

B. Training - Glass/Steele

Define training program to be given high priority in our training schedule, to insure that the risks of not removing contaminated clothing are understood, and that the proper attitude is developed toward the relative priorities of modesty and health.

C. Equipment - Glass

Evaluate options and recommend changes to our system that would minimize the discomfort of those who have to undress under a safety shower. The recommended method should not prevent ready access to showers by those using or lending assistance and be reasonably cost effective.

3. COVER GOGGLE SIGNS

J. A. Glass will review proposal at Plant Manager's Safety Board meeting.

C. F. Navarrete
