

March 11, 1932

Mr. Wm. P. Yant,
U. S. Bureau of Mines
Experiment Station,
4800 Forbes St.,
Pittsburg, Pa.

Dear Mr. Yant:

Thanks very much for your letter of March 9 and the progress report. The reactions of this compound have been very interesting to me, and especially so since there has been a considerable variation in the susceptibility of different animals.

I do not believe that Dr. Henne will be able to travel next week, and I think it likely that I shall come to Pittsburg alone in order to see the reactions of the animals under conditions of exposure.

Considering Henne's illness, I have sent your letter and report to Mr. Newill of the Frigidaire Corporation, and I await his instructions after which I shall probably call you and make a definite engagement.

Cordially yours,

RAK:EJT
