TO SERVE YOU...

"GENIE" OF A THOUSAND AND ONE COMPOUNDING JOBS

- **AT YOUR CALL IN MANY PHYSICAL FORMS:** light, mobile, oily liquids/viscous, sirupy liquids and resins/solid resins and crystals.
- **PERFORMS WONDROUS DEEDS IN FORMULATIONS:** suppresses evaporation/imparts EP lubricity/increases fire resistance/improves chemical resistance/imparts improved adhesion/plasticizes resins/swells polymers/insulates/increases lacquer flexibility/*cuts compounding costs.*
- **FULFILLS HUNDREDS OF COMPOUNDING NEEDS:** *plasticizers* for over a dozen resins including polyethylene, epoxy, vinyls; *chemical resistance builders* for quick-drying paints (alkyds, varnishes, rubber-base and water-emulsion types); *binders for pigments and dyes* in metalized coatings, silk screen inks, ceramic and glass "fired" finishes, paints, lacquers sensitive and duplicating inks; *bonding agents* in adhesive compounds for grinding-wheel abrasives, polyurethane foams, boo hot melts and heat sealants; *lubricant additives* for resistance to corrosive chemicals and atmospheres, extreme-pressure lubr gear oils, "stick" lubricants, gasket-sealing greases, cutting oils; *improvers of waxes* for precision casting, moistureproof coatings polishing and sealing; *vapor-suppressing mediums* for extending the "kill-life" of volatile and "wash-away" insecticides; *insul* ***dedusting agents*** for reactive chemicals; *tackifying agents* for air filters and other "dust trappers"; *impregnants, sealants, dielec*

You don't have to be Aladdin to discover the secrets of Aroclor's genie-like properties and performances. Monsanto has compiled a 44-page informative booklet, THE AROCLOR COMPOUNDS. It outlines electrical, mechanical, chemical and specialty uses by the score, and describes specific and general properties of more than a dozen economical Aroclor liquids and permanently thermoplastic solids. Write on your company letterhead and we'll whisk it off to you.
