

LEAD INDUSTRIES ASSOCIATION

202 MADISON AVENUE

NEW YORK 17, N. Y.

October 30, 1961

SUBJECT: 20TH EXPOSITION
CHEMICAL INDUSTRIES

To Members of the Lead Industries Association:

Enclosed please find one ticket to the 20th Exposition of Chemical Industries, to be held at the New York Coliseum on November 27 to December 1, 1961.

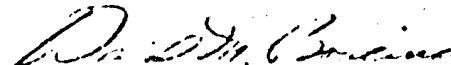

The Association will have exhibit space No. 816 in which we will feature large-scale drawings of the recommended construction techniques of lead lining various types of tanks and reactor vessels as well as lead pipe, bends and traps for conveying corrosive materials.

Noise is a problem in the chemical industries as it is in many other industries and as a result, we will also display graphically the sound attenuating properties of lead and various lead loaded plastics.

Small working models of ultrasonic mixing and cleaning tanks that use ceramic transducers made of lead zirconate-titanate will also be featured.

If you would like additional tickets, they will be supplied upon request.

Sincerely yours,

David M. Borcina
