Re: Trial Jobs

PLAINTIFF'S EXHIBIT

GP-1168

I would like to add to Mr. Abbey's letter of September 24 in regard to the procedure for testing the above product. One Day Joint Compound should be used for taping and the first coat over tapes. Topping Compound must still be used for the final skim coat over joints, corner bead and nailheads prior to texturing.

For the trials in Houston, All Purpose may be substituted for Topping in a couple of rooms for comparison purposes.
