DOCUMENT DESCRIPTION: Letter to Dr. Gardner from Vandiver Brown RE Report Noting That The Dust Sampled did NOT Uphold Theory that They Contained Less Fibrous Material & Requesting Further Sampling

August 7, 1945.

Dr. Leroy U. Gardner,
Saranac Laboratories,
Saranac Lake, N.Y.

Dear Dr. Gardner:

Let me acknowledge and thank you for yours of July 21st, enclosing summary of the report compiled by Mr. Redlin following his and Mr. Fehnel's sampling of dust at various points in the Asbestos, P.Q., mine and mill.

It is noted you feel these did not substantiate your theory that the dust in the separating mill may have contained less fibrous material than that found in other parts of the plant.

I am afraid I cannot submit any comments that would be helpful, but if you or any of the others should feel further sampling should be done - either in Canada or at some point in the United States - I shall be glad to render any assistance I can.

Sincerely yours,

Vandiver Brown,
Secretary.
