Dr. R. A. Kehoe.

Dear Dr. Kehoe,

I am enclosing herewith a letter we have received this morning from the Italo-Americana, which I think you will find self explanatory. Would you please be kind enough to let me have your comments at your early convenience.

Yours very truly,

Societa Italo-Americana pel Petrolio,
GENOA.

15th June, 1935.

Mr. T. R. A. Bevan.
London.

Dear Mr. Bevan,

We would bring the following case to your attention, so that same may be passed on to your medical people for an opinion. The case is an interesting one, but is not to be confused in any manner with Ethyl Lead poisoning. This case appears to be a simple one of Lead poisoning.

For some time an employee of our Depot at Brunico, Edoardo Auer, has been ill. Investigation had shown the Auer has been poisoned by drinking water from a container made of lead.

Dr.

sgd. R. F. Hawkins
Managing Director.

COPY OF MEDICAL CERTIFICATE

to the SOCIETA ITALO AMERICANA DEL PETROLIO

BRUNICO

In connection with the request made by this Company, I wish to make the following declaration:

[REDACTED] = During the month of January 1935 Mr. [REDACTED] noted certain ailments in both his toes and fingers. He suffered extreme pains, which gave him the sensation of heat and frigidness alternatively. These symptoms were continuous and indecisive. Finally the borders of gums by slow process of development and a blood test showed a saturnine intoxication.

The trouble with this hands disappeared, but about five weeks ago a necrosis developed on the third toe of the left foot and under the nail of the large toe. These necrosyses are very painful, while the patient is unable to either sleep or walk. The necrosis is now beginning to take a definite form, while the patient is now taking a cure to throw off all the lead substances found in his body.

I judge that he will be compelled to remain on sick-leave for about two more months.

sgd. Dr. Huttegger Riccardo
