November 11, 1983

Peter E. Berteau, PhD
California Dept. of Health Services
2151 Berkeley Way
Berkeley, CA 94704

Dear Peter:

At George Levinskas' request, I am enclosing copies of the three 2-year rat feeding study reports of the histopathological evaluation of the additional liver sections at IBT and of the two Eppley Institute (P. Pour) reports on the histopathological re-evaluation of the original three IBT studies and the Kimbrough Aroclor 1260 study.

These are copies of the reports Monsanto presented to various U.S. government agencies, November 13 and 14, 1975, which included:

NIOSH
CEQ
NCI
NIEHS
FDA
EPA

Please let George and I know of your progress in your risk assessment.

Regards,

John H. Craddock
Product and Environmental
Safety Director
