

Chrysler Chemical Division

May 18, 1973

- 4) It is confirmed that cigarette smoking greatly increases the risk of lung cancer among men and women exposed to excessive asbestos dust in their occupations.

We are prepared to send additional data on this subject to you if you require the same or to have specific members of our environmental control group meet with your union representatives, at your request.

We will be interested in your comments.

Yours very truly,

N. W. Hendry
General Sales Manager
