We had our preliminary contract with Rollins-Purle on Friday and the information obtained was quite promising. We are now drafting & coordinating a contract for disposal of plant chlorinated oil wastes.

We discussed disposal of Aroclor wastes and Rollins said they could see no problem in handling it. Before final commitment, they would like a quart sample for evaluation.

They said that if necessary, they could receive the material and store it until their incinerator is running.

They are working up a firm cost for Delaware River plant now. Cost would be roughly 6½ ¢/gal to 1000 gal/wk rate, 6 ¢/gal for 1000 - 5000, and 5½ ¢ above this for burning. Neutralization would be ≈ ½ ¢ additional, and transportation still another charge. If Aroclor is in drums their might be additional handling costs.

This is about all I plan to do on Aroclor wastes now.

Best
