General Offices

During the October 1969 semi-annual survey of the Choccolocco Creek, a number of fish were collected, quick frozen, and shipped to us for PCB residue analysis. The results of our analysis of these samples for PCB's are shown in the table accompanying this memo.

Selected extracts were also submitted for GC/Mass verification of our findings. The results of the GC/Mass analysis are also shown in the table.

A few select extracts, high in PCB's, will also be screened for polychlorinated terphenyls (PCT's) by GC/Mass.

E. S. Tucker
