

93 MACQUARIE STREET,

SYDNEY, 23rd November, 1934.

LJH.

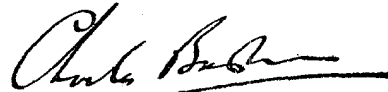

Dr. K. Fairley,
Francis House,
107 Collins Street,
MELBOURNE. VIC.

Dear Dr. Fairley,

Dr. Taylor has just completed the lead in
urine determinations for your three Tetra-ethyl Lead workers,
and they do not appear to have inhaled or swallowed much of the
ethyl.

Moffatt and Pryke show .02 mgm. per
litre, and Allen .06. But compare Allen with 400 basophilic
cells; is this chance or a very delicate test?

Yours sincerely,

CHARLES BADHAM.
Medical Officer of Industrial
Hygiene.

** Moffatt & Pryke are Vacuum Oil Co. chemists.
Allen is C.O.R. man who has never been on a mine.*

K.D. Fairley
