Mr. Barnes,
Westinghouse Co.,
East Pittsburgh, Pa.

Dear Mr. Barnes:

When Dr. Hazlett suggested that we inoculate another series of animals with enamel, I mentioned to him that I should like to make up fresh suspensions of the dust.

Would you be kind enough to bring or send me another sample of the material and would it take too long for you to do size determinations? You remember the particles in the first sample were all smaller than 10 microns.

I'm sorry I missed you when you were here.

Very truly yours,

Lucy Schwartz
