

USE BAROID

Don't risk blow-offs
in drilling your wells. Its gravity of 4.28 is constant throughout the entire column of a well. This insures safety against gas pressures.

Baroid has never failed

BAROID

also protects
drilling equipment

IN addition to making the drilling of wells safer, Baroid has remarkable slimming properties. It forms a coating over the drill stem and over the inside and outside of the casing, protecting these important parts from the friction of "cuttings."

BAROID

on cable tool jobs

USUALLY "mud-fluid" is associated with rotary drilling operations. Yet a Baroid fluid was used successfully on a cable tool job in Winfield, Kansas, to shut off gas pressures. This fluid is heavy enough to seal off the trouble-making gases, yet not too heavy to interfere with the dropping action of the tools.

Baroid is a specially processed form of barytes which stays in suspension indefinitely. It is absolutely inert, non-electrostatic and non-electrolytic. Its slimming qualities protect equipment in drilling through the hardest formations.
