RE: INDUSTRIAL HYGIENE COMMITTEE MEETING
MAY - 1966

The April-May meeting of the Davenport Industrial Hygiene Committee was held in the small dining room of the Main Cafeteria May 24, 1966.

Attending the meeting were Messrs. D. E. Schroeder, R. G. Wandrop, L. P. Hughes, R. J. Kegarise, J. T. Hobbs, J. H. Lowry and Dr. A. W. Shafer.

The audio level meter discussed in the last minutes has been received. Preliminary checks have been made in some areas of the mill. It is estimated that full noise level surveys will be made of all areas of the mill by July 15. The preliminary surveys have been given Dr. Shafer for his evaluation.

Marinite dust continues to be a problem. The exhaust system has been checked and the CFM readings across openings and area in general are adequate for normal expectations. The problem involves the radial-arm saw in that the exhaust hood cannot be extended. It was generally agreed a table saw would solve the problem as far as the dust was concerned. Accordingly a shop order for the saw will be entered.

For years we have attempted to cope with the foul water coming

from the well at Kelly Cottage. Chlorination attempts have been unsuccessful since the water not only tastes and smells foul but has been contaminated by bacteria. The water supply for the Cottage is important because of the numerous picnics and meetings held there. To solve the problem a plastic line will be run from the Plant sanitary water supply and the old well will be permanently capped.

J. H. LOWRY
