Re: Asbestos Removal During Renovation

Celanese Corporation Technical Center at 1901 Clarkwood Road, Corpus Christi plans to remove approximately 157 square feet of asbestos containing insulation from a cylindrical vessel, V-1032, which is five feet wide by ten feet high. The vessel was built in 1962 and obtained by this facility in 1974. V-1032 has been utilized as organic chemical storage.

Celanese is scheduled to do the renovation on October 14, 1985. This renovation involves removal of the existing insulation and replacement with a non-asbestos substitute. The procedures defined in 40 CFR Part 61 will be followed. We tentatively plan to dispose of the removed material at U. S. Ecology in Robstown as a Class IH waste.

If I can provide additional information, please call me at (512) 241-2343 Ext. 4512.
