84-S Sheet Packing
with Australian Blue Fiber
Your letter April 2

We have today reviewed with Mr. Poulson your proposition of supplying the subject sheet packing on the orders listed in your letter of April 2, releasing this material as a Sales and Research responsibility. Mr. Poulson indicated his willingness to go along with the release of the experimental 84-S sheet which you now have on hand, and we therefore are writing you at this time to request that you make shipment of such sheets of the subject material as appear in your judgment to be relatively satisfactory in appearance, releasing this material on the following orders:

932-P-25569
932-P-25125
932-P-22036
932-N-20266.

If your inspection of the subject experimental sheets now on hand indicates that you do not have a sufficient quantity to supply all of these orders, kindly ship such available material as you have and advise relative to the orders which are left unfilled.

Please arrange to credit PE 51-457 dated February 20, 1948, entitled "Standard 84-S Compressed Asbestos Sheet Packing Containing a Special Grade of Blue Asbestos Fiber," for the value of the sheets shipped in connection with the foregoing.
