Dear Jack:

We have been carrying on some calculations with the quantities and types of lead compounds which are emitted to the atmosphere from automobile exhaust. I seem to recall that either you or Dr. Kehoe had some data on the kinds of lead compounds which are emitted, and also some information on the proportions of lead in the atmosphere which originate from auto exhaust as compared with that which originated from other sources. If possible, I would like to have reports or reprints of this work.

Sincerely yours,

Lew
