For passenger and freight stations, hotels, pavilions, park buildings, etc., *Standard Depot Paint* excels all others in appearance, economy, and durability. It is not a patent paint, nor is there any secret connected with it. It is made with those materials which time and experience have proved to be the best ingredients for a paint of this kind, and which are the only materials that can be endorsed by the best paint makers and paint users.

Pure White Lead, the base for all white and tinted paints for outside use.

Pure Zinc White, whiter than lead and which, combined with it in proper proportions, neutralizes the tendency to chalk which is so inevitable where lead alone is used.

Pure Linseed Oil, the only safe vehicle to use in a paint subject to out-door exposure.

Pure Spirits of Turpentine and the best Oil Drier, in such quantities as to insure proper working and drying qualities.

The strongest and purest toned Tinting Colors that can be obtained.

These are the materials which enter into the composition of The Sherwin-Williams Standard Depot Paint.

These materials are mixed and ground by machinery of our own design and make. Every detail of their manufacture is watched by trained experts. The paint is more finely ground and the materials more thoroughly incorporated together than it is possible for
