SUBJECT : Product Data on Alkylates for Export

REFERENCE :

TO : P. B. Benignus

PBENI

Paul, confirming phone of 3/25/70, here are the specific physical properties of our major grades of Alkylate as you requested:

	Alkylate Grade		
	215	225	230L
Flash Point - Degrees F. (Clev. Open Cup)	300	300	300
Boiling Range - Degrees F.	535-565	540-575	570-605

For your further guidance, please contact me as soon as possible, when you start entering into firm sales committments. If you will be making shipments in bulk lots, there is a substantial leadtime requirement at the plant to arrange for shipment to the lifting location.

Should you require shipments in drums, the plant would have to arrange for an outside contract drumming operation to fill your orders. Our price book shows 55 gallon drums as a standard container; however, we do not produce, inventory, or presently sell in drums. We occasionally fill and ship 2 or 3 drums for Pilot Plant or other testing purposes.

If you require further information or clarification, please advise.
