Dr. Jerome F. Cole
Lead Industries Association
292 Madison Avenue
New York City, N. Y. 10017

Dear Dr. Cole:

One of my customers in Indianapolis told me recently about a project in which LIA is involved wherein it was to help evaluate lead volatilization from a hobby-type pottery kiln in a school art department environment. It was my understanding that this project was to be undertaken in conjunction with The Orton Foundation.

My customer asked me if there has been any progress on this project and is expecting me to report back to him. I did not see anybody from LIA at the recent Ceramic Convention and Mike Vukovich of The Orton Foundation could tell me nothing.

Can you help me?

Yours very truly,
HAMMOND LEAD PRODUCTS, INC.

Roger W. Braden
Director, Technical Sales
