Dr. William E. McCormick
Department of Industrial Hygiene and Toxicology
The E. F. Goodrich Company
Akron, Ohio

Dear Dr. McCormick:

This acknowledges your letter of June 23 in which you present the results of the solubility studies on films 012212 and 012220G.

Since no chloride or nitrogen was found in the extractable material it is probably reasonable to assume that the extractable is composed largely of glycerol mono-oleate and acrawax. Under these circumstances we can see no objections to the use of the above films for food packaging purposes.

Very truly yours,

A. J. Lehman
