Monsanto has been able to locate only partial information as to the quantity of PCBs by year and by type manufactured by Monsanto at the Anniston plant from 1935 to 1971. Generally, the documents located state only what appears to be a total production figure for all Aroclor products formulated with PCBs in a given year and do not state a production number for each such Aroclor product (e.g., Aroclor 1242 or Aroclor 1248). However, when annual production information for a particular Aroclor product formulated with PCBs was reflected in one of the documents, such information is included in the following summary. Further, no total production information or production information by particular Aroclor products formulated with PCBs has been located for a number of years and no such information has been located for any year prior to 1953. Finally, the information located is not always consistent.

The following is a summary of the information located as to the quantity of PCBs by year and by type manufactured at the Anniston plant:
