review the description of Mr. Vandergucht's tumor from the surgeon, or from radiologists that examined him, and I wanted to review his clinical course.

Q And was that the information, that you just discussed recently for the jury, about how the tumor was growing and how it appeared from the surgeon's description?

A Yes, sir.

Q And in your opinion, were those descriptions and what you saw on the medical records consistent with peritoneal malignant mesothelioma?

A Yes, sir, those description were consistent with mesothelioma.

Q Was Mr. Vandergucht eventually diagnosed with peritoneal mesothelioma in the hospital?

A Yes, sir. That was a diagnosis eventually made at Carroll County General Hospital, and I believe he was also diagnosed at Baltimore County Hospital.

Q Now, you were never a treating physician or reviewing pathologist for Mr. Vandergucht when he was first in the hospital back in 1980; that is correct?
