SUBJ: 1991-92 TLV'S: NOTICE OF INTENDED CHANGES

It should be noted the ACGIH has proposed to lower the recommended TLV for toluene from 100 ppm to 50 ppm as an eight-hour TWA. Based on current exposure levels, I don't believe this will be an issue but some administrative changes may be necessary, such as changing documents anywhere the TLV is listed, if the proposed limit is adopted.

Based on the normal process, the change would not occur for one year.
