Subject: Asbestos Source
Nicolet Industries

We were contacted by Mr. Ernest Wild, Jr. of this organization about April 30th, 1963. This was a contact made after a call on Lou Montant about February 28th in Cincinnati. We discussed asbestos and suggested a 25¢ sample would be all that was needed to make a rough comparison with the present source product.

Subsequently, the shipment arrived and was turned over to you. On July 12th was asked if there were any results or when we might expect them. We have had no answer.

A few days ago, Mr. Wild phoned from New Jersey to learn the results of the test work. We answered that we had so many things on the fire that some had to wait. Mr. Wild expects to be in Tulsa on August 26th and will phone us to learn of the present status. A brief check with Jim Dickerson, in your absence indicates very little done and that it might be two months before something could be done. This information I will pass along to Mr. Wild if he calls on Monday, thereby saving him the time and expense of stopping in Joplin.

This is being summarized in this fashion, so all interested parties will have a current understanding of the situation.
