Pyranol 1470

Dr. R. L. Jenkins		
Mr. T. K. Smith, Jr.		
Mr. P. G. Benignus		
Mr. D. B. Hosmer -	WGK Plant	
Mr. C. Barbre	"	"
Mr. T. W. Dalton	"	"
Mr. S. M. Kulifay	"	"
Mr. J. W. Graves	"	"

We understand from Mr. Hosmer's memorandum of May 16 to you on this subject that Krummrich Plant is in a position to start preparation of this material promptly upon receipt of the Trichloro-Tetrachlorobenzene blend from Hooker Electrochemical Company. This information has been given to the General Electric Company.

We are placing an order at once with Hooker for a 7,000-gallon tank car of Trichloro-Tetrachloro blend for shipment to us the latter part of July, and it will be used to prepare material for shipment to General Electric at Oakland, California, in early August. It may be that other orders for Pyranol 1470 will be forthcoming and require shipment earlier than August; and should this situation arise, we shall arrange to bring in the Trichloro-Tetrachloro blend earlier than indicated above.

In this connection, and as suggested by Mr. Dalton in his memorandum dated May 12 to you, we are placing an order for five gallons of Trichloro-Tetrachloro blend for immediate shipment to Mr. Dalton for experimental purposes in the preparation of a small, or pilot plant, scale, batch.

We have established the following code number for Pyranol 1470:

1040-364-75-03

So that all those interested will be sure to have them, we are attaching to this memorandum a copy of General Electric Company's Pyranol 1470 specifications; and the product we prepare should meet these specs. We are also attaching a copy of specifications covering the Trichloro-Tetrachlorobenzene blend which Hooker Electrochemical Company is to furnish.

T. H. Wheelock
