Look Ahead with Lead

August 5, 1963

LEAD EXPOSURE AND SAFETY ILLNESS NO. 151

To Members of the Lead Industries Association, Inc.:

"The Sequelae of Pica With and Without Lead Poisoning"

This article reprinted from the AMERICAN JOURNAL OF DISEASES OF CHILDREN, June 1961, Volume 105, pages 609-616, represents the first stage of a study sponsored in part by LIA as research designed to investigate the problem of lead poisoning in young children. Dr. Hugo Dunlap Smith, the author, is a well-known pediatrician and has performed a most competent piece of work. The present article represents the first of a series which are designed to cover clinical and laboratory manifestations, emotional and psychological manifestations of adverse reactions following lead poisoning.

We have a limited number of reprints which will be available on request, first come first served. We anticipate that when the other articles in the series have been published, a large number of reprints of the whole series will be secured for distribution to hospitals, health departments, pediatricians, and others who are concerned with these problems.
