Company Profiles

BROWN & ROOT LTD

Brown & Root is one of the world's largest and most diverse engineering, project management and construction companies. Founded in 1919, Brown & Root is wholly owned by the Halliburton Company. We have the experience and capabilities to handle projects from a few hundred man-hours of consulting to total responsibility for engineering, procurement and construction of projects costing several billion dollars.

With over 36,000 employees world-wide, 75 years of experience in the engineering/ construction business, and a specialised and responsive management team, Brown & Root offers a total capability in services ranging from preliminary studies through project development, planning, detailed design, procurement, project management, construction management, and operational maintenance.

Every discipline is available through our pool of engineers and support staff. No other group can match the depth and breadth of the knowledge and experience held by Brown & Root in fields as diverse as offshore oil and gas production and transportation; sub-sea construction; petroleum and chemicals processing; dockyard management; nuclear waste handling systems; water resources; supply, treatment and distribution; roads, highways and transport planning; rail and light rail; tunnels and bridges; buildings and building services; geotechnical and earth science engineering; ports, harbours and airports, underground storage and transmission; and facilities management, externalisation and management.

The keystone of Brown & Root's business philosophy is multi-disciplined capability, supported by a shared international experience in solving problems. Brown & Root is organised such that its world-wide resources provide its clients with vast experience and expertise in construction, engineering, project management, and operations and maintenance in a number of industry business units.

Each major industrial and commercial sector is served by a specific business unit within which will operate a number of trading organisations on a regional basis, but will also be able to draw from the world-wide engineering resource pool.

Brown & Root Limited, the principal UK operating company has revenues of over \$430 million annually and employs over 4800 personnel in engineering and project management alone. Together with its associated companies, Brown & Root in the UK controls revenue of over \$1 billion with 13,000 staff working in the UK.
