Gentlemen:

On June 24, 1959 the Division of Occupational Health conducted a survey of your glass plant to determine whether any operations could be creating a health hazard.

We observed the raw materials handling system, the weighing, conveying, and mixing of the raw materials, also the melting of the ingredients, polishing, and glass-finishing operations. In most cases we found the materials being handled safely. However, we feel that the spraying of talc, the removal of the glass from the oil bath, and the radiant heat at your furnace are questionable hazards. We plan to check these areas at some future date with sampling equipment to determine whether a hazard exists.

If there are any questions regarding these operations before our next visit, please feel free to call on us.

Very truly yours,

DIVISION OF OCCUPATIONAL HEALTH

Marvin M. Schuman
District Engineer
