Due to the extreme cold during the last part of December, the December dust counts were postponed until today. Since the mill has been in operation for almost two full days, it should have reached a state of equilibrium in regard to airborne dust. There were large piles of ore on the dry mill floors during the sampling period due to plugged chutes and other equipment.

The temperature was 18°F, wind was 1-2 MPH from the northwest, and the barometer read 30.60 during the sampling period.

<u>Floor</u>	<u>Dust Counts (mppcf)</u>
6	9.8
5	5.4
4	5.6
3	3.4
Half Deck	7.8
2	4.7
1	3.4
