

ETHYL CORPORATION OF CANADA LIMITED

Memorandum of
Meeting with Occupational Health Branch
Department of Public Health
Regina, Saskatchewan

Subject: HIGHER TETRAETHYL LEAD CONTENT IN MOTOR FUEL

The meeting was held on Tuesday, January 12, 1960, at 10:00 A.M. in the new Provincial Health Building. Present were Dr. Norman Williams, Director, Occupational Health Branch, Mr. A.L. Riegert, Technical Assistant, Mr. A.C. Tully and Dr. D.R. Warren.

Dr. Williams has been director of this Branch for a few years and has been building up his department slowly in the new Provincial Health Building. A laboratory and facilities for occupational health work have been provided. A Supervisor of Occupational Health Nursing, Mrs. J. Woods, has been employed to act as consultant in this capacity. A health centre has been developed for the care of provincial civil servants housed in the building and the proximate legislative buildings and other offices. Dr. Williams was pleased to show us his laboratory facilities.

Activities are in the fields of agricultural occupational health including chemical sprays, etc., radioactive materials in the northern part of the province, industrial developments in Regina, Saskatoon, Moose Jaw and other smaller centers of population, in keeping with good general policies.

Department of Public Health
Meeting - January 12, 1960

Mr. Tully outlined the economic and technical justification for the increase of tetraethyl lead to 4 ml. The discussions were friendly and easy. Dr. Williams was obviously familiar with the data contained in U.S. Public Health Service Bulletin #712, "Public Health Aspects of Increasing Tetraethyl Lead Content in Motor Fuel". Dr. Warren outlined the health aspects and emphasized the company's interest in industrial hygiene generally and well as tetraethyl lead specifically.

The meeting concluded with the lunch hour and Dr. Williams and Mr. Riegert joined us for lunch.
