

INDUSTRIAL HYGIENE

The industrial hygienist: definitions . . . scope . . . function _____	39-2
Dusts, fumes, and mists: sources . . . magnitude of particles . . . dispersion . . . separation in airborne dusts . . . mechanism of inhalation . . . retention of dust . . . size of particles inhaled _____	39-3
Physiological effects of dusts, fumes, and mists: pneumoconioses toxic dusts and fumes _____	39-6
Organic solvents: labeling . . . general physiological effects . . . degree of severity of solvent hazards . . . "safety" solvents _____	39-9
Physical energy stresses: thermal environment . . . atmospheric pressure . . . mechanical vibration . . . repeated motion . . . nonionizing radiation . . . ionizing radiation . . . noise _____	39-12
Biological agents and other occupational infections: tuberculosis fungus infections . . . anthrax . . . "Q fever" . . . brucellosis . . . erysipeloid . . . upper respiratory tract infections _____	39-18
Occupational skin diseases: types of dermatitis . . . causes of dermatitis . . . causative factors . . . physical examinations eliminating contact with irritants . . . hygienic measures _____	39-19
Evaluating the hazard: comparing recommended limits . . . a comprehensive system of standards . . . peak concentrations time-weighted concentrations _____	39-26
Measuring the hazard: sampling techniques . . . types of measuring instruments . . . electrical direct-reading instruments . . . color-change and stain-length instruments . . . limitations of instruments . . . direct-reading vs lab analysis _____	39-28
Controlling environmental hazards: substitution . . . changing the process . . . isolation or enclosure . . . wet methods . . . local exhaust ventilation . . . general or dilution ventilation . . . personal protective equipment . . . housekeeping . . . special control methods . . . training and education _____	39-36
