Instructions on CAFCO Bags Regarding Use of Respirators.

This is in reference to Jim Verhalen's memo to you dated January 2, 1962 regarding the printing of instructions on the CAFCO bags for the use of dust respirators.

We recommend the following respirators and filters to be used - permissible respirator and respirator filters for dusts and pneumoconiosis-producing mists, such as the Wilson Respirator #460 and Filter #415. Both of these items are approved by the U. S. Bureau of Mines, Approval #2161 for use where dust and pneumoconiosis-producing mists occur. This definitely should be part of our recommendations, and it would be very wise to have these on the CAFCO bags.

The question now arises, which promptly should be discussed with the rest of the recipients of this memo, as to what problems will be encountered if some of the workmen and union people, on seeing this, start asking questions.
