CLRS

RAPID-GRAM

TO (Please Print) <i>C. Paton</i>	LOCATION <i>St Louis</i>	SUBJECT <i>Threshold T66 Determination in edible oils</i>
MESSAGE <i>(Cancelling)</i> The attached letter from threshold is self explanatory. The work that Marcus has done is very significant for T66 in the oil industry. For years we have tried to give the edible oil mfg.'s a quick and easy method to identify contaminated oil. One of the reasons the industry has resisted T66 is the ease with which they can recognize the odor of 2,4,6-trichlorophenol in oil. The method we have proposed in the past (my letter 7/26/73) has been unsatisfactory. In approving this request one other thing should be done that Marcus has not mentioned. The process should be read by one of our qualified people in research to approve the worthiness of the statements made re our product. His name will appear as a "reader" when the paper is submitted.
