Mr. Richard Davis

This will confirm our telephone conversation of today.

I received a call from a Mr. Kirk Daley, who is a lawyer representing Rohr Aircraft. They have a suit filed against them by a worker who, for over nine months, opened an autoclave once or twice daily, which had been heated to a temperature of about 400°. Whether this is F or C, I am to find out later.

In this autoclave, there had been a leakage into the insulation of Pydraul A-200, due to a faulty seal. The allegation is that this Pydraul volatilized due to heat and upon opening the autoclave, irritated the man.

The questions Mr. Daley would like to have answered are:

1. What is the composition of Pydraul A-200.
2. What are the breakdown products at 400° (F or C).
3. Could we have anybody available to testify as a witness on these breakdown products.

Mr. Daley is to call me in about a week or so and try to arrange a phone hookup. You will be in on this conference call.

7-24
