Notes on Bill Clede call 7-28-69

Works for Marlin Firearms Co.

Also a stringer or speciality writer for Hartford Times
- I suspect he is the outdoor writer or science writer - tried to pursue this, but he spoke in generalities.

His interest was aroused when Sen. Gaylord Nelsen of Wisc. said that the Ag. Dept was sitting on a final report on the use of DDT

The Conn. Ag. department examined fish brought in in plastic bags and found PCB. At first thought it was from the bags, so they are now looking at fish brought in in bags and sterile glass bottles.

This seems to be his hang-up -- if not the bags then how did it get into the fish? Perhaps industrial wastes?

Conn. has outlawed aerial spraying in 1965 -- broadcast use of DDT a year or two later. Now using a product Sevin

Fri - Elma Wheeler
Jack Gaudett
- award of studies in Conn
- any contact from Conn people

quite certain we have had request for samples - Conn State Lab requested
