Steven and Andy-

Thank you for attending our EEAC meeting last week. It sparked plenty of conversation for the remainder of Thursday and Friday. If there is anything you would like from us on some of our short term asks (please let me know):

1. Addressing the FER 1 into FER 2 deadlines by merging them into one deadline in Feb 2027, extend GW monitoring deadline as some CCRMUs will be delineated in later 2026 which will prove difficult to then conduct 8 baseline samples quarterly before the deadline;
2. Addressing the free liquids memo
3. Working on a policy memo regarding types of beneficial use that can be permitted on-site.

I also am working with members to collect data on the regulatory changes we discussed last week. I am hopeful that as we find sites/data for those changes, we can engage your team to discuss/show some of the technical issues we are seeing. Finally, as always, I am happy to chat anytime you may have questions about our asks or what we are seeing in the field.

Have a nice week and talk soon
Richard
