Garlock Announces LATTICE-BRAID

PATENTED

An Entirely New Braided Packing Construction

GARLOCK Patented LATTICE-BRAID Packings are braided *through and through*—in an entirely new and different way from ordinary braided packings.

All braided strands are lattice-linked into a structural unit, resulting in greater strength, longer life, semi-automatic action and unusual flexibility.

Special new machines enable us to make LATTICE-BRAID in a distinctive pattern which is *infinitely better and positively proven.*

GARLOCK LATTICE-BRAID Packing is available in the following styles: GARLOCK 730 for centrifugal and rotary pumps handling hot or cold water, caustic solutions or weak acids. GARLOCK 731 for rods operating against steam, gas, acids, lye and caustic soda solutions. GARLOCK 732 for heavy duty service against high pressure steam or hot oil. GARLOCK 736 for centrifugal or rotary pumps handling acids or strong chemical solutions. GARLOCK 751 for centrifugal or rotary pumps handling cold oil or water.

THE GARLOCK PACKING COMPANY
