Indications: Holter monitor is requested for evaluation of palpitations, dyspnea, and episodes of dizziness.

Findings: Baseline rhythm reveals atrial fibrillation. Average heart rate is 75 beats per minute, minimum of 39, and a maximum of 190 beats per minute. Atrial fibrillation with right ventricular response is present during multiple regions of this recording. Pauses are present, the longest being 2.6 seconds during this recording. This is associated with dizziness. Approximately 357 PVCs were present.

Plan: Recommendation for permanent pacemaker for bradycardia control and advanced medical therapy for tachycardia control.
