quality begins*

felted asbestos walls assure long cable life

N.E.C. Type AVA cables may look alike, but a look under the braid shows how time-proven Rockbestos A.V.C. Type AVA is built to ensure long life.

Each asbestos wall in Rockbestos A.V.C. construction is a dense, homogeneous, "seamless tube" . . . long, silky fibres of asbestos, thoroughly impregnated with selected compounds, make a nonporous,

permanently heat-resistant wall. Heat dissipation is uniform. Dielectric strength is maintained under severe conditions. This seamless construction cushions the cable, protects the varnished cambric from rupture in the sharpest bends.

Write for the test and construction specifications of Rockbestos A.V.C. available in the new booklet: "Specification RSS-88".
