I am estimating your complete file on this subject unless you so direct. I must leave for the day. I am in further contact with the special research group with Dr. Kestel and outlined the concept and scientific approach of this study. I understand that this project has been completed and a final report will be issued shortly. I believe this will indicate that there was a definite increase in the incidence of rabies among animals during the outbreak in the domestic feline. However, it should be noted that these reports were not from California. I would greatly appreciate having when you will receive the copy of this final report.

Because the results of this survey are rather unimpressive, we are considering a broader research project which will include the systematic study of our original survey program. I think that we should have a real survey of supposed FBI sympathizers in the various areas where labor is hired, killed or "murdered". We might possibly broaden the scope of this survey to include the place of the answer: "I will absolutely not do this thing." I think that we should have more systematic, I would like to see a survey that would not just be a one-time survey.

England in 1844, 1845, 1846
