

Memo to: Dr. Kehoe

From: Dr. Zavon

Date: December 10, 1959

It has recently been brought to my attention that a beverage, Wagner Seltzer Water, in the half gallon bottle when dispensed through their usual siphon arrangement has been found to contain 0.414 mg. of lead per L. When the same fluid is decanted from the bottle without going through the dispenser, it contains 0.279 mg. per L.

I thought that this might be of interest to you and that you might want to so inform the Wagner Company. I have done nothing about this information as of this date.
