LEAD . . . for lasting quality . . .

in pipe, roofs, or paint

The enduring, long-life quality and durability for which lead is justly renowned, makes it the ideal metal for many purposes, including water pipes, tank lining and roofs.

Lasting quality is also an outstanding characteristic of white lead and red lead, two paint pigments derived from lead.

White lead paint is widely used for the protection of buildings outside and the decoration of them inside, while red lead is the accepted paint for structural iron and steel.

National Lead Company makes white lead and red lead of the highest quality under the well known Dutch Boy brand.

In addition, it serves dependable sources of supply for many other lead products — such as lead pipe and fittings, babbitt metals, solders, etc.
